

Does a same-call grid-resolution gain transfer to a held-out rotation run?

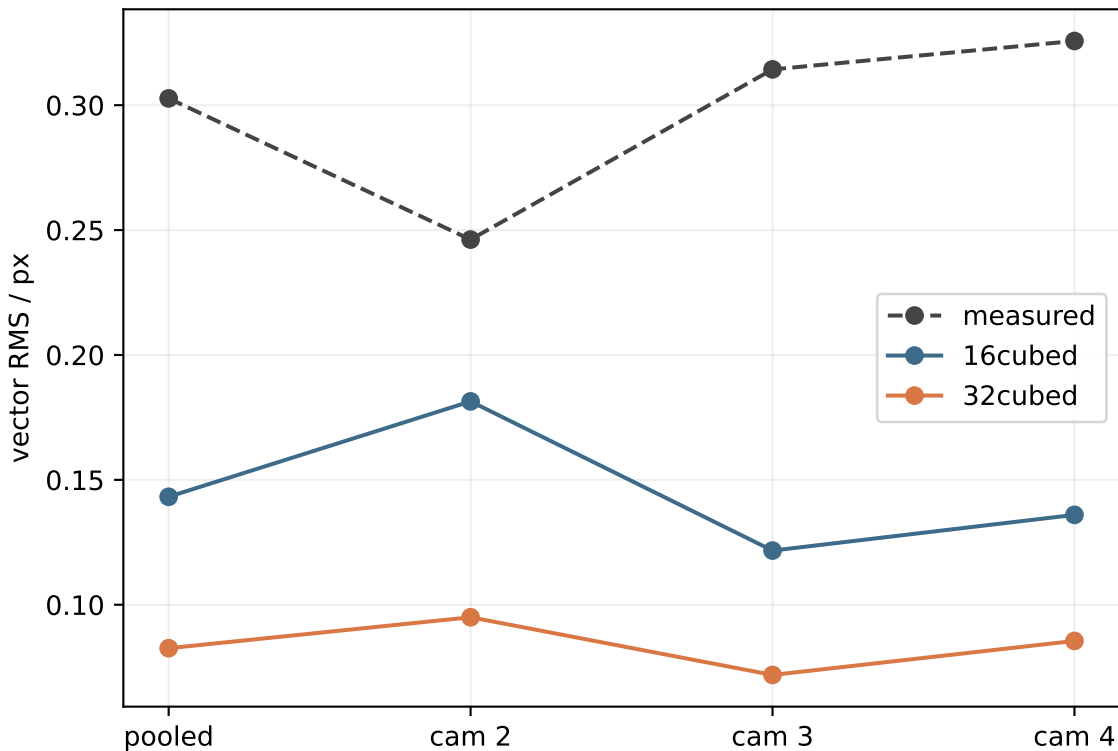

Already-opened rotation-40 development observations

Support fit versus held-out rotation-run transfer

Prediction amplitude without post-hoc scaling

PSU ROTATION-40 RESOLUTION TRANSFER

Decision: SUPPORT_RESOLUTION_GAIN_DID_NOT_CLEAR_NUMERICAL_TRANSFER_GATE_NO_GO
Pooled 16 - 32: -0.116328
Numerical screen: ≥ 0.010
All cameras nonworse: False
Same cameras; one held-out rotation block, not 3 repeats.

Real observations, one opened rotation, no volumetric truth.
Not an algorithm/compute-fairness comparison.
No amplitude fit, iteration selection, or new algorithm.
Final rotations remain sealed.
